[SYNTHETIC TEST FIXTURE — invented content for automated tests; not research by any publisher]

Synthetic Two-Column Note

Left column paragraph one: synthetic memory demand rose 12% in the quarter as hyperscale clusters expanded and contract terms lengthened at every supplier we track.

Left column paragraph two: synthetic HBM allocation stays tight through next year, with lead times near 30 weeks and buyers prepaying for capacity they need later.

Right column paragraph one: synthetic grid queues reached 2,600 GW as interconnection studies slowed and transformer deliveries stretched beyond two years.

Right column paragraph two: synthetic utilities plan capex up 18% this year, the largest rise in a decade, much of it for transmission upgrades and substations.

Synthetic Constraints

- Synthetic lead times: two-year backlogs.
- Synthetic customisation: built to order.
- Synthetic labour: short of skilled staff.
- Synthetic delays: permits outlast the build.
